

SAVIO JOHN

Full-Stack Software Engineer — Mobile · Web · Backend

Kochi, Kerala, India | savio.john.t@gmail.com | +91-8248155832 | linkedin.com/in/savio-john-b927821b5/ | github.com/saviojohn | saviojohn.github.io/portfolio

EXPERIENCE

Software Engineer — DataEquinox

(Dec 2023 – Present)

Mobile (Flutter)

- Built a customer-facing fintech mobile app end-to-end (Flutter, Riverpod, GoRouter, Dio) — Flutter Secure Storage-backed auth, KYC document verification, multi-currency wallets, config-driven FX/remittance transfer flows, and in-app support chat — spanning 15 feature modules on iOS and Android
- Implemented a real-time sync layer (Socket.IO, 14+ event types) keeping wallet balances, transaction status, and chat updated without manual refresh, plus FCM/APNs push notifications with deep-link navigation
- Shipped bilingual EN/JA localization (~1,232 keys/locale) with backend locale-map resolution that preserves in-progress transfer/KYC state across language switches

Backend (FastAPI)

- Built an end-to-end Firebase Cloud Messaging pipeline (device registry, RabbitMQ workers, Redis dedupe/rate-limiting) for a FastAPI remittance backend (PostgreSQL, Alembic, Dockerized), delivering push notifications across 4 customer event types
- Implemented a secure forgot-password flow (OTP via AWS SES, Redis-backed sessions, rate limiting, JWT invalidation on reset), covered by 13 automated tests

Web (Next.js / React)

- Built customer-account modules (address/profile CRUD, wishlist, dual-auth order invoices for guest and logged-in users) with Formik/Yup validated forms and Google Tag Manager e-commerce instrumentation (10+ event types) for a retail storefront
- Built and deployed (Firebase Hosting, GitHub Actions CI/CD) a staff/security gate-pass admin module integrating 17 REST endpoints for CRUD, filtering, pagination, and QR-based check-in/check-out workflows, with thermal-print (80mm) pass generation and Excel export
- Built WhatsApp template creation, campaign broadcast hardening, and Meta embedded signup onboarding for a business messaging platform supporting 25+ reseller brand configurations across 6 locales

PERSONAL PROJECTS

CogniView — AI Movie Discovery App (React 19, Redux Toolkit, OpenAI API, TMDB API, Firebase)

- Built a GPT-3.5-powered natural-language movie recommendation engine with parallel TMDB metadata resolution, Firebase auth, and 3-language localized UI

GitHub: github.com/saviojohn/CogniView

Crypto Order Book & Market Indicators Dashboard (Next.js 15, TypeScript, MUI 7, Recharts, Binance WebSockets)

- Built a custom WebSocket hook streaming live top-10 bid/ask depth for BTC/ETH/XRP, with Recharts-based cumulative depth charts, a rolling spread buffer, and a buy/sell pressure indicator

GitHub: github.com/saviojohn/orderbook-market-indicators

SKILLS

Mobile: Flutter · Dart · Riverpod · Provider · GoRouter · Dio · Firebase Cloud Messaging · APNs · WebSocket / Socket.IO · Flutter Secure Storage · Config-Driven UI · iOS & Android

Frontend / Web: React · Next.js (App & Pages Router) · TypeScript · Redux Toolkit · Recharts · Material UI (MUI) · Formik / Yup · Config-Driven UI · Google Tag Manager · QR Code Gen. & Scanning · PDF Generation (react-pdf) · WhatsApp Business API

Backend: Python · FastAPI · Pydantic · PostgreSQL · Async SQLAlchemy · Alembic · Redis · RabbitMQ · python-socketio · Firebase Admin SDK · AWS SES (boto3) · OpenAI API

Tools & Practices: REST API Integration · Git · Docker · CI/CD (GitHub Actions) · JWT Auth · i18n / Localization · Excel Export (SheetJS) · Unit / Widget / Golden / Integration Testing (pytest, flutter_test)

EDUCATION

Amrita Vishwa Vidyapeetham, Amritapuri — Bachelor of Computer Applications (BCA)

2020 – 2023 | Kollam, Kerala

CERTIFICATIONS

- JavaScript, React & Frontend System Design — NamasteDev (Akshay Saini)
- Databases for Developers (98%) — Oracle Dev Gym · Introduction to SQL (#17733495) — DataCamp
- Microsoft AI Classroom Series — Microsoft & NASSCOM · AWS Builders Series — Amazon Web Services
